Getting Here

Maratua Island is nestled in a hidden expanse of the Pacific Ocean, far removed from the hustle and bustle of city life. It offers a serene escape, a tranquil paradise untouched by the outside world. The island preserves its pristine natural beauty, becoming a secluded haven.

Lush tropical rainforests blanket much of the landscape, teeming with a diverse array of flora and fauna, including numerous birds and small mammals. The surrounding beaches boast soft, white sands, and the sunlight dances upon them like a golden veil.

However, what truly captivates visitors to Maratua Island is the vibrant marine life that thrives in its azure waters. Beneath the surface lies a peaceful underwater realm, where colorful marine creatures display their wonders in a breathtaking spectacle. As you dive into the depths, you will encounter majestic coral reefs, adorned with a variety of hard and soft corals.

To reach Maratua Island, take a domestic flight to Berau or Tarakan. Our speedboat will await your arrival at the airport to whisk you away to our resort, with a journey of 2 to 3 hours expected. You will arrive at the resort on the same day

Dive Site

Maratua is surrounded by a tropical atoll with a lagoon, and at the other end, there are steep cliffs and coral reefs. This massive U-shaped coral reef is covered with various types of corals, attracting a diverse array of marine life. Deep-sea and coral reef fish include hammerhead sharks, barracudas, triggerfish, dogtooth tuna, mackerels, bumphead parrotfish, tropical fish, double-headed sharks, nurse sharks, gray reef sharks, and whitetip reef sharks. Batfish can also be observed in this area. The major highlight is witnessing the world's largest aggregation of schooling scalloped hammerhead sharks at Big Fish Country!

Kakaban Island is also a significant sanctuary for stingless jellyfish. In an inland lake, just a short walk from the village, you can discover three different types of jellyfish: Aurelia aurita (moon jellyfish), Mastigias papua (spotted jellyfish), and Tripedalia cystophra (box jellyfish). Kakaban not only features the Jellyfish Lake, but also boasts undisturbed coral reefs and steep wall dives, increasing the likelihood of encounters with large marine life. Here, you can find large schools of barracuda and jackfish. There are also various types of sharks, ranging from whitetip sharks, blacktip sharks, and grey reef sharks to thresher sharks, leopard sharks, and, if you're lucky, even can see Hammerhead Shark.

Sangalaki is Indonesia's most important green sea turtle nesting site. At night, mother turtles crawl onto the beaches, spend 3-4 hours digging nests, and lay their eggs. Every day, new hatchlings emerge from their shells. The surrounding dive sites are mostly known for being the best spots to observe manta rays.
